

JUSTIFICATION

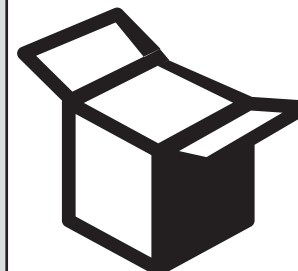

We started this project to make the experience of surfing the Webserver of our school easier and more intuitive for both phones and computers.

SMART OBJECTIVE

Create a new Web server to manage the services and some content offered by the school.

BENEFITS

In updating the school's web server we bring a benefit to the school's students.
The visualization of the web server from mobile devices is greatly improved in fact it is possible to view school schedules without bugs. The design of the page has finally become pleasant and innovative in fact the page has been completely redesigned.

PRODUCT

The product consists in updating the Webserver of the school we are attending. The Web page will manage the various services from the school.

REQUIREMENTS

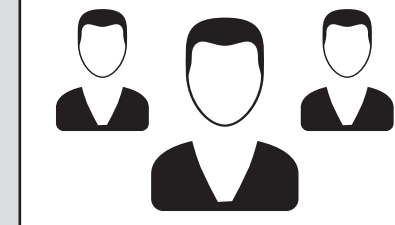

The new Web Server of the G. Marconi Institute will offer different services about the school. The site allows you to view through some buttons the following services:

- Timetable of the classes.
- Access to the site of the school campus.
- Access to the register of votes.
- Access to the site "poldo" where to order sandwiches.
- Other minor services.

In addition, the site offers to read the news about the school and to see the time.
The background of the Web server represents a drawing of the school and it changes according to the weather.

EXT STAKEHOLDERS

Within our project there will be the contribution of the school for advice and for the possible supply of materials. In addition, our classmates can give us help and opinions for our project.

TEAM

Gruppo 7:

Corsi Matteo
Scardoni Riccardo
Osti Tommaso
Convertino Riccardo

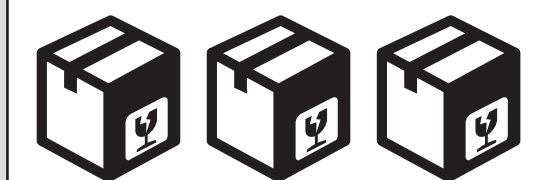

CONSTRAINTS

The constraints of our project are:

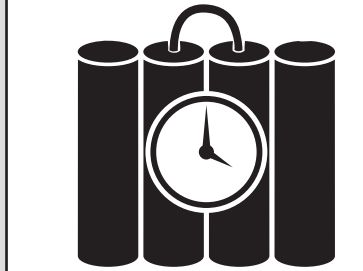

- We may not have enough time to develop the project.
- We may not have the necessary technical knowledge to complete the desired project

ASSUMPTIONS

The assumptions are that by the end of the first quarter of our institution must be submitted a significant part of the project and by the end of the year the project must be finished.
The Web server must be better than the previous one.

DELIVERABLES

At the end of the project will be delivered all web pages, images, codes related to the Web server. In addition, all documentation related to the project will be delivered.
For school purposes we will deliver the documents that we used to best carry out the activity of Scrum to complete the project.

RISKS

The risks of the project may be as follows:

- Our company consists of four members instead of three.
- In 4 employees we have to better manage the parts of the project.

TIMELINE

The project started on 24/10/2019 and will end on a date to be defined

COSTS

This is a free school work and therefore it is not paid.
